第1次隨堂考

考試時間:50分考試方式:開書考

- 1. Write a program that includes subroutine **UARTConfig** (using **a full ascending stack**, with initial stack pointer 0x40000000, to STM and LDM in the subroutine) and a call to the subroutine.
 - (1) The UART is configured as follows
 - (a) Pin P0.0 and P0.1 become the transmit and receive pins, Tx0 and Rx0, respectively.
 - (b) 8 data bits, odd parity, 1 stop bits.
 - (c) A Baud rate if the UART is to generate a serial signal at a Baud rate of 9600 Baud using 16 MHz.

(Show the results of (1) in the windows of UART0 after execution.)

- (2) Calculate the **System Clock Frequency** from the windows of UART0 in(2)
 - (a) Calculate using Keil Tool Code
- 2. 執行課本 p.348-349 程式。
 - (1) 印出字串"TKU-ECE+學號",

Ex: TKU-ECE612450097

(2) 改寫上述程式碼,依序印出第 0、1、3、6、...項字元(T 為第 0 項; U 為第 2 項...)(間隔為 1、2、3、4...)

Ex : TK-E47

▶ 繳交內容:按照結報格式寫完整,把結報 word 上傳 iclass 對應作業位置。

▶ 繳交期限: 113/03/28 14:00

▶ Word 檔名:微處理機概論 學號 姓名 QUIZ1

▲ 注意事項(任一項未達到,不予計分):

- 1. 截圖時必須同時截到程式碼、記憶體,並標出最終答案的記憶體位置。
- 2. 程式需在 Keil Tool 程式視窗內展示且展示程式與執行結果的每一截圖須看的 到學號姓名。
